Re: T2K Completes Transition to Visiport® VP220.C Model, Ceases VP220.B5 Production

T2K produces the World's most comprehensive product line of spin window systems and is the leading manufacturer of spin window systems worldwide, under the Visiport® and DiscAir™ trademarks.

With the successful field record of the Visiport® Model VP220.C, available in several configurations to suit the needs of machine tool builders and retrofit customers alike, the decision to cease production of the similarly sized Visiport® Model VP220.B5 in order to concentrate on new systems has been made.

As of September 30, 2010, the Visiport Model VP220.B5 model will enter limited distribution, with normal availability ceasing after March 31, 2011.

T2K will accept new orders for all configurations of Model VP220.B5 through March 31, 2011.

After March 31, 2011, all order requests for Visiport® VP220.B5 systems will be confirmed with the appropriate Visiport® VP220.C configuration. Replacement parts and service for all Visiport® VP220.B5 models in field use will continue to be available.

Customers wishing to place blanket orders for scheduled delivery beyond March 31, 2011 should contact T2K in order to make special arrangements.
