

220C635 Camera Mounting Kit

Remotely view live feed of the machining process using the Camera Mounting Kit with a GoPro Session 4 video camera (sold separately*). The Visiport® Camera Mounting Kit is compatible with new and existing Visiport E220 spin windows.

Vision inside the machine cabin increases safety by eliminating the temptation to bypass machine interlocks. With this kit, new ways to optimize programming can be discovered, decreasing set-up and production time. Increase sales by using videos of your products and services on your website or next trade show.

The GoPro Session 4 video camera can be activated remotely using its remote control, and interfaces using a mobile device or tablet for viewing over Wi-Fi. Camera battery is easily accessible by removing the spin window disc assembly.

INSTALLATION

The Visiport® Camera Mounting Kit is used in conjunction with our standard E220 unit. This kit is designed to replace the basic mounting plate—including the unit, the total combined height is approximately 61mm. See installation instructions for the electrical spin window unit for more detailed information.

FEATURES & OPTIONS

- Installs on glass or polycarbonate safety windows.
- Compatibility with new and existing Visiport E220 and VP220 model spin windows.
- Total combined height of appx 61mm with unit.
- Made of light-weight blue anodized aluminum.

* The Visiport® Camera Mounting Kit is not endorsed or supported by GoPro. Technical support for the camera and remote are provided by GoPro: shop.gopro.com/cameras/hero-session/CHDHS-102.html
